

## GO-TO-MARKET STRATEGY

# OpenAI

Win Global 2000 and high-growth builders with the most trusted, enterprise-ready agentic AI platform that ships faster than anyone, integrates into existing MLOps/data stacks, and monetizes via tiered platform seats, usage, and workflow SKUs for coding and operations agents.

## Strategy

**Positioning.** For enterprise AI platform decision-makers who must scale trustworthy, high-ROI generative AI from pilot to production, OpenAI is the enterprise AI research and deployment platform that delivers fast-advancing models, agentic workflows, and governance-by-design. Unlike hyperscaler-bundled or single-model toolkits, we combine frontier capability velocity with audited controls and deep ecosystem integrations to reduce risk and time-to-value.

**For Who:** Enterprise AI leaders, product teams, and governed IT in Global 2000 and digital-native scale-ups

**Who Need:** to deploy trustworthy, scalable agentic AI and coding assistants with measurable ROI

**Category:** Enterprise AI research and deployment platform

**Promise:** fastest path from prototype to governed production with agentic workflows and ecosystem integrations

**Unlike:** hyperscaler bundles or single-model providers focused on price or narrow SKUs

**Proof:** analyst recognition for enterprise coding agents; rapid model iteration; growing enterprise adoption and integrations

## Customer - Ideal Customer Profile

**Primary Segment:** Global 2000 enterprises scaling AI platforms across multiple functions

**Firmographics:** \$1B+ revenue, multinational footprint, regulated or quasi-regulated domains (finance, health, public-sector adjacent), existing cloud commitments, centralized platform/ML leadership

**Technographics:** Cloud-first, using modern data platforms (data lakes/warehouses), CI/CD, MLOps tooling; APIs and SDKs integrated into microservices; SSO/SCIM, audit/logging, and governance requirements

**Why Now:** AI platform/toolchain spend is accelerating; buyers are moving from pilots to production and need trustworthy governance, security, and ROI; agentic/coding assistants entering mainstream enterprise shortlists

**Buying committee:** VP Engineering / Head of AI (economic + technical sponsor); CIO / Head of Platforms (budget + integration); CISO / Head of Compliance (risk/governance gate); Director of Product / Line-of-Business GM (use-case owner); Procurement / Legal (commercial & data protection)

**Top pains:** Proving trustworthy AI with auditability, safety, and compliance at scale; Integration friction across data, MLOps, identity, and observability stacks; Pressure to deliver rapid ROI while features commoditize and prices compress; Difficulty operationalizing agentic workflows and coding assistants beyond pilots; Vendor lock-in and uncertainty about future regulation and governance demands

**Trigger events:** Board mandate to operationalize AI beyond pilots; Security/compliance review blocking generative AI tools; Adoption of a new MLOps/data platform needing LLM integration; Developer productivity or support backlog KPIs missed; Renewal or consolidation of AI/ML tooling contracts

**Disqualifiers:** On-prem only with no cloud allowance; No security/governance requirements (hobby or single user); Cost-only buyers prioritizing cheapest inference regardless of capability/governance; Organizations without executive sponsorship for AI platform deployment

**Secondary segments:** Digital-native scale-ups building AI-first products; Mid-market SaaS and marketplaces embedding AI features; Functional team power users standardizing on ChatGPT Enterprise/Teams

## Plan - Beachhead Strategy

**Segment:** Global 2000 engineering/product organizations deploying enterprise coding assistants and agentic dev workflows

**Rationale:** Analyst-validated momentum for coding agents; clear ROI via developer productivity and cycle-time reduction; strong fit for governance-by-design and platform integrations; high expansion potential across adjacent workflows

**Entry wedge:** Enterprise Coding Suite: governed code assistant + agentic workflow (plan, tool-use, code change management) with enterprise security/compliance and MLOps/data platform integrations

**Expansion path:** Expand to customer support and operations agents with workflow SKUs -> Roll out org-wide productivity (ChatGPT Enterprise) with governance controls -> Enable domain-specific agents connected to enterprise data via integrations -> Upsell model customization, evals, observability, and audit tooling -> Globalize across business units and regulated regions

**Market sizing:** Top-down: ~2,000 Global 2000; target initial SOM = 10% of G2000 with 2-5k developer seats per logo and usage uplift; bottom-up: seat ACV (coding + platform) plus usage fees; TAM/SAM scale further as workflows extend beyond dev to support/operations.

## Edge - Competitive Differentiation

| Competitor  | Where we win                                                                                                                                                                                                    | Where they win                                                                                                                                     | Sharpest message                                                                                                                          |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Anthropic   | Velocity of model iteration and breadth of agentic workflow features; Ecosystem integrations and platformization for enterprise deployment; Packaged multi-workflow expansion beyond chat (coding + operations) | Perceived leadership in responsible scaling artifacts and policy transparency; Distinct packaged SKUs (Claude Cowork/Code) for clear buyer mapping | Enterprise-grade agentic platform that turns safety controls into audited outcomes and faster time-to-production-beyond a chat assistant. |
| DeepSeek    | Frontier capability breadth and reliability for complex enterprise tasks; Governance, compliance posture, and enterprise support; Global brand trust and roadmap certainty                                      | Aggressive inference cost positioning for commodity workloads                                                                                      | Reduce total cost of ownership with higher developer throughput and governed workflows-not just cheaper tokens.                           |
| SiliconFlow | First-party frontier models with managed reliability and support; Enterprise integrations, identity, and audit features; Agentic workflow orchestration and coding suite                                        | Marketplace breadth of third-party models out of the box                                                                                           | Choose a governed platform optimized for production outcomes and support, with integrations that de-risk scale.                           |
| EleutherAI  | Managed service reliability, support SLAs, and enterprise security; Faster roadmap delivery of agentic capabilities and tooling; Commercial accountability and compliance artifacts                             | Open research community and permissive open models for DIY builders                                                                                | Ship faster with a managed, audited platform that meets enterprise controls while retaining flexibility via integrations.                 |

## Commercial - Offer & Pricing

**Packaging:** Tiered platform packaging aligned to buyer maturity: 1) team productivity and lightweight governance; 2) product/developer platform with enterprise security/compliance and MLOps integrations; 3) governed enterprise with advanced model risk, auditing, and agentic/coding workflows. Add vertical accelerators as add-ons.

**Tiers:** Team Productivity (ChatGPT for Work); Builder Platform (Developers & Product); Governed Enterprise (Platform & Security); Add-ons: Vertical Accelerators, Premium Support, Dedicated Capacity/Throughput

**Anchor:** Anchor on productivity ROI and developer throughput. Public reference price for Team to frame value; show TCO vs hyperscalers by bundling governance, agents, and support. Use annual commit discounts and usage tiers as anchors for Builder/Enterprise. | **Motion:** Hybrid PLG + enterprise sales. Self-serve for Team; sales-assisted for Builder; enterprise agreements for Governed Enterprise with procurement, security review, and co-sell alliances.

**Levers:** Per-seat pricing for Team and Enterprise productivity seats; Usage-based pricing for API/compute (tokens/throughput) with volume tiers; Packaging of governance/audit features in higher tiers; Premium model/feature access (agentic workflows, coding assistant); Annual and multi-year commitments with ramp schedules; Vertical accelerator add-ons priced per solution pack; Dedicated capacity/priority throughput surcharge

**Risks:** Hyperscaler/open-model price compression erodes margins; Seat cannibalization if features blur across tiers; Complexity increases procurement friction; Perceived lock-in without clear portability/governance assurances

## Motion - GTM Motion

**Primary:** Enterprise platform sales targeting Global 1000 and digital-native scale-ups for Governed Enterprise and Builder Platform, activated via security/compliance narratives and ROI playbooks. | **Secondary:** Product-led growth for Team Productivity and developer APIs to seed accounts, expand via usage insights, and convert to enterprise agreements; ecosystem co-sell with MLOps/data platforms.

**Rationale:** Enterprise buyers prioritize trustworthy AI, governance, and agentic/coding workflows; PLG seeds adoption and lowers CAC while partnerships reduce integration friction and accelerate expansion.

**Risks:** Lengthy security and regulatory reviews delay deals; Partner channel conflict with hyperscalers and platforms; PLG-to-enterprise conversion stalls without clear upgrade triggers; Rapid feature parity reduces differentiation, pressuring win rates

## Channels - Channel Plays

| Channel                                                                     | Funnel role | Leading indicator                                                                                        | Invest |
|-----------------------------------------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------|--------|
| Security/Compliance Field Marketing (CISO councils, private roundtables)    | DEMAND      | # of security stakeholder meetings per target account; % security questionnaire pass-rate on first cycle | HIGH   |
| Alliances with MLOps/Data Platforms (Databricks, Snowflake, Azure ML, etc.) | CONVERSION  | # of sourced/influenced opportunities per partner per quarter; joint win rate %                          | HIGH   |
| Developer Ecosystem (Docs, SDKs, GitHub templates, hackathons)              | AWARENESS   | Monthly active developers; template forks/stars; demo-to-PoC starts                                      | HIGH   |
| Industry Solution Accelerators (finance, health-adjacent, retail)           | DEMAND      | # accelerator downloads; # vertical pipeline \$ created per quarter                                      | MEDIUM |
| Customer Reference Program (case studies, ROI webinars)                     | CONVERSION  | Attendee-to-opportunity conversion %; case study-assisted win rate %                                     | MEDIUM |
| Performance Marketing (search/display for developer/API intent)             | AWARENESS   | CPL for developer sign-ups; API key activations within 7 days                                            | MEDIUM |
| Account-Based Marketing (Global 1000)                                       | DEMAND      | # MQAs per target account; multi-threaded contact penetration                                            | HIGH   |
| Sales Enablement and ROI Playbooks                                          | CONVERSION  | Stage-to-stage conversion rates; average discount %                                                      | MEDIUM |

## Messaging by Persona

**Enterprise AI Platform Decision-Maker (VP Eng / Head of AI) - Ship governed, agentic AI applications faster with a platform proven at scale-without compromising security or cost control.**

*Channel:* Alliances + ABM    *CTA:* Schedule an architecture and governance design session.

*Pillars:* Agentic and coding workflows accelerate delivery velocity; Enterprise-grade security, audit, and model risk tooling; Flexible APIs and integrations with existing MLOps/data stacks; Predictable economics with usage controls and dedicated capacity options

*Objections:* Concern: Lock-in and portability. Response: Standards-based APIs, export pathways, partner integrations.; Concern: Cost vs hyperscalers/open models. Response: Bundle governance/agents; TCO models show reduced build/operate costs.; Concern: Safety/regulatory exposure. Response: Built-in audit, policy controls,

model risk artifacts.

## **Product-led Team Builder (Director Product / Head of Innovation) - Integrate high-impact AI features in weeks using ready-to-ship agents, templates, and SDKs that scale to enterprise needs later.**

*Channel:* Developer Ecosystem + Performance Marketing *CTA:* Start with a template and deploy a PoC this week.

*Pillars:* Templates and SDKs for common app patterns; Straightforward pricing and generous free tier to experiment; Seamless path from PoC to production with governance uplift; Quality models with rapid iteration cycles

*Objections:* Concern: Build complexity. Response: Opinionated templates, examples, and support.; Concern: Future enterprise requirements. Response: Upgrade path to governance and compliance features.; Concern: Cost predictability. Response: Usage caps, alerts, and tiered pricing.

## **IT Governance and Security Gatekeeper (CISO / Compliance) - Operationalize trustworthy AI with auditable controls, data safeguards, and policy enforcement that align to evolving regulations.**

*Channel:* Security/Compliance Field Marketing *CTA:* Request a security and compliance briefing with artifacts.

*Pillars:* Data residency, encryption, and tenant isolation options; Comprehensive audit logging, model risk assessments, and policy controls; Third-party attestations and regulatory alignment; Incident response and monitoring playbooks

*Objections:* Concern: Regulatory uncertainty. Response: Continuous updates and mapped controls; shared responsibility matrix.; Concern: Data leakage. Response: Clear data handling, opt-out from training, isolation options.; Concern: Vendor risk. Response: Transparency artifacts and third-party audits.

## **Professional Power User and Team Champion - Multiply team productivity with secure ChatGPT and task-specific agents your org can manage and scale.**

*Channel:* PLG In-product + Email Lifecycle *CTA:* Activate your workspace and invite your team today.

*Pillars:* Enterprise controls with simple team onboarding; Task-specific agents and coding assistants; Integrations with everyday tools; Measurable ROI via usage insights

*Objections:* Concern: Admin overhead. Response: Easy provisioning, SSO/SCIM, usage analytics.; Concern: Data privacy. Response: Organization controls and data handling transparency.; Concern: Feature overlap with other tools. Response: Comparative ROI and consolidation benefits.

## **Content Engine**

**Cadence:** Weekly product updates; bi-weekly technical deep-dives; monthly security/governance briefings; quarterly vertical solution spotlights; ongoing case studies.

**Distribution:** Owned channels (docs, blog, release notes), developer hubs (GitHub, package managers), partner co-marketing, targeted ABM emails, webinars/roundtables, in-product education.

**TOFU:** Thought leadership on agentic workflows and enterprise AI trends; Benchmark reports on developer productivity and AI ROI; Analyst-aligned insights on governance and risk

**MOFU:** Technical guides and starter templates for common use cases; Architecture patterns with partner integrations; Security artifacts and governance mappings

**BOFU:** ROI calculators and case studies by vertical; Live demos and PoC-in-a-week programs; Migration and TCO comparison toolkits

# Sales Playbook

**Qualification:** MEDDICC adapted for AI Platforms: Metrics (target ROI, productivity/time-to-market), Economic buyer (CIO/VP Eng), Decision criteria (security, governance, latency, cost-per-token/seat, ecosystem integrations), Decision process (security review, pilot success metrics, procurement), Implicated pain (pilot-to-production gap, governance risk, developer velocity), Champion (Head of AI/Platform Eng), Competition (hyperscalers, model-native, open-source)

| Stage       | Objective                                                                                  | Exit criteria                                                                                                                                   |
|-------------|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| PROSPECT    | Identify ICP accounts with near-term AI platform spend and agent/coding assistant interest | Account fits ICP, active initiative identified, security/governance needs captured, intro meeting secured with Platform + Security stakeholders |
| DISCOVERY   | Quantify business impact and trust-by-design requirements; align on success criteria       | Documented use cases, success metrics, architecture hypothesis, security requirements, confirmed buying committee and timeline                  |
| SOLUTIONING | Design target architecture, packaging, and compliance plan                                 | Solution design doc, pricing & packaging draft, pilot plan with success criteria approved by Eng + Security                                     |
| PILOT       | Prove value, safety, and integration fit                                                   | 2 quantified wins (e.g., 20-30% cycle-time reduction, 30-50% deflection in low-value tasks), security sign-off, referenceable architecture      |
| PROCUREMENT | Close commercials and risk review                                                          | MSA/SOW executed, security schedule agreed, implementation plan and enablement calendar locked                                                  |
| DEPLOY      | Roll out to initial teams with enablement and governance live                              | Go-live to first cohort, admin instrumentation active, support runbook in place                                                                 |
| EXPAND      | Land-and-expand seats, use cases, and partner integrations                                 | Signed expansion (new seats/use cases/regions), reference secured, joint case study approved                                                    |

**Must-have collateral:** Security and Trust Pack (data handling, compliance, model risk, audit features); Reference Architectures (by cloud + MLOps stack); ROI Calculator (vs hyperscaler/open alternatives); Pilot Playbook with red-teaming and acceptance thresholds; Vertical Solution Accelerators (top 3 industries); Competitive Battlecards (Anthropic, DeepSeek, SiliconFlow, EleutherAI); Pricing & Packaging Guide with tiered enterprise options; Executive One-Pager for CIO/CISO

## Demand-Gen Mix

**ABM (1:1 and 1:few):** Target Global 1000 and digital-native scale-ups with active AI platform evaluations; use intent + technographics; align with partner co-sell to overcome integration risk

**Partner-led (Cloud + MLOps/Data):** Co-market with Databricks, Snowflake, Azure/AWS/GCP marketplace; bundle governance integrations to reduce procurement friction and speed trust

**Product-led Growth (PLG) + Trials:** Self-serve trials with enterprise guardrails; in-app prompts to upgrade to governance/audit; convert power users to team/enterprise via usage thresholds

**Paid Demand (Search/Programmatic/Developer):** Capture high-intent keywords around enterprise AI platform, coding assistants, agent workflows; retarget evaluator cohorts with security/ROI proof

**Organic/Content/Analyst:** Trust-by-design content, model cards, governance guides; analyst relations amplifying enterprise coding agent validation; SEO on 'enterprise AI governance' and 'agentic workflows'

**Community/Events:** Hands-on labs and hackathons with agent workflows; CISO roundtables on trustworthy AI; showcase vertical accelerators with lighthouse customers

**Campaigns:** Trust-by-Design: Ship Faster, Govern Always; From Pilot to Production: Agentic Workflows that Scale; The Enterprise Coding Assistant Benchmark: Real ROI in 90 Days; Your Stack, Your Cloud: OpenAI + Databricks/Snowflake Reference Week; Secure-by-Default Trials: Prove Governance Before You Scale; AI

## Metrics & North Star

**North-star metric:** Enterprise Net ARR (new + expansion) from platform and agentic/coding assistant SKUs - Directly reflects value capture amid pricing pressure and expansion potential; aligns GTM, product, and success around durable enterprise adoption

### Input metrics

| Metric                                            | Target band                   | Cadence                    |
|---------------------------------------------------|-------------------------------|----------------------------|
| Qualified ABM Opportunities Created (per quarter) | 80-120 per Q (1:1/1:few ABM)  | Weekly review, QBR roll-up |
| Partner-sourced/Influenced Pipeline %             | 25-40% of enterprise pipeline | Monthly                    |
| Trial-to-PQL Conversion Rate (enterprise intents) | 12-18%                        | Weekly                     |
| Security Review Cycle Time                        | 30 days median                | Monthly                    |

### Funnel KPIs

| Metric                                | Target band                | Cadence |
|---------------------------------------|----------------------------|---------|
| SQO Rate (from MQAs)                  | 35-50%                     | Monthly |
| Win Rate vs. Competitive (enterprise) | 30-45%                     | Monthly |
| Sales Cycle Length (enterprise)       | 75-120 days median         | Monthly |
| Pilot Success Rate                    | 70-85% hitting agreed KPIs | Monthly |

### Health metrics

| Metric                                     | Target band                                               | Cadence   |
|--------------------------------------------|-----------------------------------------------------------|-----------|
| Gross Dollar Retention (enterprise)        | 92-96%                                                    | Quarterly |
| Net Revenue Retention (enterprise)         | 115-130%                                                  | Quarterly |
| Unit Economics: Gross Margin % (inference) | 60-70%+                                                   | Quarterly |
| Compliance Coverage (controls attested)    | Top frameworks per target verticals; 90% control coverage | Quarterly |

## 90-Day Execution Roadmap

### Weeks 1-4 (Foundations) - Lock trust-by-design narrative, ICP targeting, and partner GTM to de-risk security/integration

| Workstream                 | Deliverable                                                                                    | Owner                        | Success signal                                                  |
|----------------------------|------------------------------------------------------------------------------------------------|------------------------------|-----------------------------------------------------------------|
| Security & Governance Pack | Unified Trust Center + audit/model-risk docs and CISO one-pager                                | Security PM + Legal + PMM    | Time-to-security-approval median 30 days in pilot cohort        |
| Reference Architectures    | Databricks/Snowflake + Azure/AWS/GCP blueprints with governance controls                       | Solutions Arch + Partner Eng | 3 reference architectures published and co-approved by partners |
| Enterprise Packaging       | Tiered SKUs (Platform Core, Governance+, Agents/Coding Assist), transparent pricing guardrails | PM + Finance + PMM           | Pricing guide adopted in 100% enterprise quotes                 |
| ABM Targeting              | Top 400 accounts list with intent and technographics                                           | RevOps + SDR                 | 80 MQAs sourced baseline                                        |

## Weeks 5-8 (Activate) - Run pilots with governance baked-in; launch partner co-marketing and PLG upgrades

| Workstream          | Deliverable                                                              | Owner                         | Success signal                                           |
|---------------------|--------------------------------------------------------------------------|-------------------------------|----------------------------------------------------------|
| Pilot Program       | Standardized 6-week pilot kit incl. red-team playbook and ROI calculator | Solutions Eng + PMM           | 15 pilots launched; 70% with security sign-off by week 6 |
| Partner Co-Sell     | Marketplace listings + 3 joint webinars/labs                             | Alliances + Partner Marketing | \$8-12M influenced pipeline from partners                |
| PLG Upgrade Motions | In-product upsell for governance features + sales assist                 | Growth PM + Sales Assist      | 12-18% trial->PQL and 20% PQL->SQL                       |
| Analyst & Content   | Enterprise coding assistant benchmark report + case studies              | AR + Content                  | Top 3 SERP for 'enterprise coding assistant benchmark'   |

## Weeks 9-13 (Scale) - Convert pilots, expand lighthouse wins, and operationalize repeatability

| Workstream                       | Deliverable                                                                                        | Owner                   | Success signal                                              |
|----------------------------------|----------------------------------------------------------------------------------------------------|-------------------------|-------------------------------------------------------------|
| Pilot-to-Prod Conversion         | Executive value reviews + standardized SOWs                                                        | Sales + CS              | 70% pilot conversion; \$10-15M new ARR closed-won           |
| Vertical Accelerators            | 3 accelerators (e.g., Financial services KYC assist, Healthcare documentation, Retail catalog ops) | Industry PMM + SA       | 6 expansion deals sourced via accelerators                  |
| Enablement                       | MEDDICC + competitive playbooks and objection handling                                             | Sales Enablement        | Win rate vs competition 35%                                 |
| Telemetry & Governance Analytics | Admin dashboards for audit, usage, and cost controls                                               | Product Analytics + Eng | Top 50 enterprise tenants with active governance dashboards |

## Strategic Risks & Mitigations

| Risk                                                              | Likelihood | Impact | Mitigation                                                                                                        | Owner                      |
|-------------------------------------------------------------------|------------|--------|-------------------------------------------------------------------------------------------------------------------|----------------------------|
| Regulatory tightening increases security reviews and slows deals  | High       | High   | Proactive Trust Center, model-risk tooling, attestations, and CISO briefings; offer data residency and audit APIs | CISO + PMM                 |
| Pricing pressure and feature parity from hyperscalers/open models | High       | High   | Tiered enterprise packaging, ROI benchmarks, partner bundles, and agentic workflow differentiation                | CFO + PM                   |
| Integration/procurement friction in large enterprises             | Medium     | High   | Deep MLOps/data platform integrations, marketplace listings, reference architectures, co-sell                     | Alliances + Solutions Arch |
| Safety incidents or model failures in production                  | Medium     | High   | Red-team pilots, guardrails, monitoring, incident response runbooks, safe defaults                                | Head of Safety + CS        |
| Ecosystem dependency on partner distribution                      | Medium     | Medium | Diversify channels (PLG, direct ABM), build first-party governance features, multi-cloud GTM                      | GTM Leader                 |
